

14-18 April 2019

Documentation of the Work of the World Health Organization

Conference B

# World Health Organization

## Committee Staff

|                 |                           |
|-----------------|---------------------------|
| <b>Director</b> | Marielisa Figuera Saggese |
| <b>Chair</b>    | Rafiya Naqvi              |

## Agenda

- I. Antibiotic Resistance as a Threat to Global Health
- II. Strengthening Global Resilience against Outbreaks and Epidemics
- III. Addressing Mental Health in Protracted Humanitarian Crises

## Resolutions adopted by the Committee

| <b>Code</b> | <b>Topic</b>                                       | <b>Vote</b>            |
|-------------|--|------------------------|
| WHO/1/1     | Antibiotic Resistance as a Threat to Global Health | Adopted without a vote |
| WHO/1/2     | Antibiotic Resistance as a Threat to Global Health | Adopted without a vote |
| WHO/1/3     | Antibiotic Resistance as a Threat to Global Health | Adopted without a vote |
| WHO/1/4     | Antibiotic Resistance as a Threat to Global Health | Adopted without a vote |

## Summary Report

The World Health Organization held its annual session to consider the following agenda items:

- I. Antibiotic Resistance as a Threat to Global Health
- II. Addressing Mental Health in Protracted Humanitarian Crises
- III. Strengthening Global Resilience against Outbreaks and Epidemics

The session was attended by representatives of 22 Member States. On Sunday, the committee adopted the agenda of I, III, II, beginning discussion on the topic of “Antibiotic Resistance as a Threat to Global Health.”

By Tuesday, the Dais received a total of 4 proposals covering a wide range of sub-topics such as multi-stakeholder partnerships, antimicrobial pollutants in aquatic environments, and the regulation of and education on the distribution of antibiotics. The discussions were extremely well facilitated by the attending delegations. They revolved around solutions that truly embodied the collaborative values of the United Nations and were comprehensive, multilateral, and agreed upon by the majority of the body. Much of what was discussed surrounded increasing cooperation between developed and developing states, the partnerships between the public and private sectors, and raising awareness on the topic as a whole.

On Wednesday, 4 draft resolutions had been approved by the Dais, 2 of which had amendments. The committee adopted 4 resolutions following voting procedure, all of which received unanimous support by the body. The resolutions represented a wide range of issues stated above and highlighted the serious nature of antimicrobial resistance as a global threat. Cooperation, efficiency, and diplomacy were the foundation of the committee in their approach to resolution writing and the delegates' commitment to addressing antimicrobial resistance was illustrated through their hard work and eagerness for rational compromise.

**Code:** WHO/1/1

**Committee:** World Health Organization

**Topic:** Antibacterial Resistance as a Threat to Global Health

---

1 *The World Health Organization,*  
2  
3 *Considering* World Health Assembly resolution 58.27 on containing antimicrobial resistance and the  
4 United Nations Environment Program *Global Programme of Action for the Protection of the Marine*  
5 *Environment from Land-Based Activities* (1995), adopted by Member States to address antimicrobial  
6 pollution in oceans due to the threat antibiotic resistance poses to global health,  
7  
8 *Acknowledging* the World Health Organization (WHO) report on *Health, Environment and Climate*  
9 *Change* (2018), which details the importance of ecosystems in health and well-being and the threat of  
10 antibiotic pollution to fragile oceanic ecosystems, as it relates to the health and well-being of people as  
11 well as the survival of sea salt and seafood markets in coastal towns,  
12  
13 *Deeply concerned* by the unregulated dumping of sewage and medical waste into rivers, dams, and  
14 oceans from point sources as it increases concentration levels of antibiotics in waterways and abates the  
15 efficiency of antibiotics in treating disease, as it relates to intergovernmental cooperation between WHO,  
16 Food and Agriculture Organization (FAO), and UN Environment Assembly (UNEA),  
17  
18 *Noting* the solution of decontamination of water through bioremediation with microbes such as  
19 *EcoClean™* and *Green Clean* as presented by the United Nations Industrial Development Organization  
20 (UNIDO) for mitigating the development of antibiotic resistance in rivers, dams, and oceans due to the  
21 interaction of diluted antibiotics and bacteria in aquatic environments,  
22  
23 *Observing* the harmful effect that poor sanitation practices and runoff from domestic and commercial  
24 sources has on degradation of oceanic ecosystems and the propagation of antibiotic resistance with  
25 emphasis on developing countries which lack access to clean water in health facilities as addressed by  
26 the United Nations Children's Fund program Water, Sanitation and Hygiene (WASH),  
27  
28 *Stressing the importance* of gaining scientific data such as that of the UN Water Global Analysis and  
29 Assessment of Sanitation and Drinking Water 2017 report on the presence of antibiotics in aquatic  
30 ecosystems as classified by strains and locations,  
31  
32 *Recognizing* the importance of tracking antibiotic use in fisheries through databases such as the Global  
33 Antimicrobial Resistance Surveillance System (GLASS), as it supports economic growth and food security  
34 in regions such as East Asia,  
35  
36 *Noting further* the intentions of the UNEP Consultation Meeting on Coral Reefs in 2016 and resolution  
37 2/12, which followed the Framework for Action program to establish closer integrated management of  
38 antibiotics in the ocean as well as bolstered research and monitoring methods,  
39  
40 *Concerning* the importance of healthy aquatic environments for saltwater conversion in domestic and  
41 international markets, with emphasis on the access to uncontaminated water in Small Island Developing  
42 States (SIDS) as it contributes to their economic prosperity by maintaining livelihoods for workers in the  
43 saltwater industry and related aquatic industries,  
44  
45 *Acknowledging* the need for long-term, sustainable funding as supported by the multisectoral organization  
46 United Nations Global Compact (UNGC) concerning data collection, water stewardship and collective  
47 action for reducing water pollution through support from private industries which oversee aquaculture,  
48

- 49 1. *Recommends* cooperation between the WHO and national and international organizations such as  
50 the UNEP, to coordinate strategies with willing Member States through international and regional  
51 conferences such as the International Collaborative Conference in Clinical Microbiology and  
52 Infectious Diseases, carried out by the British Society for Antimicrobial Chemotherapy to address the  
53 reduction of antimicrobial pollution in aquatic settings;  
54
- 55 2. *Reminds* Member States to consider the long-term impact of antibiotic water pollution through risk  
56 assessments on specific ocean ecosystems as it relates to the preservation of relevant aquatic  
57 markets, carried out by local governments under the direct supervision of WHO;  
58
- 59 3. *Invites* Member States to reduce sewage dumping from industrial and agricultural facilities, domestic  
60 households, and medical facilities with proposed UN intra-agency collaboration by;  
61
- 62 a. Cooperating between Member States and UN entities such as the WHO and FAO to inhibit  
63 illegal medicinal and industrial waste dumping practices;  
64
- 65 b. Supporting sustainable waste management strategies in cooperation with the UN Global  
66 Partnership on Waste Management (GPWM);  
67
- 68 c. Promoting irrigation methods with the aid of FAO, specifically watershed efforts, cover crops,  
69 and buffers which limit agricultural runoff in commercial farming strategies as it contributes to  
70 the well-being of populations;  
71
- 72 4. *Further recommends* practices of bioremediation utilized by UNIDO, which introduce indigenous  
73 species of resistant bacteria into water to consume antimicrobials and decrease antibiotic  
74 concentration levels by mitigating development of multidrug resistance in waterways to be adopted by  
75 Member States;  
76
- 77 5. *Calls upon* Member States to develop capacity building to improve sanitation efforts in the aquatic  
78 environment by implementing ambassador programs through WHO in developing countries which  
79 equip citizens in rural communities with resources such as educational pamphlets and hand sanitizer  
80 to carry out water sanitation strategies;  
81
- 82 6. *Promotes* the practice of data collection carried out through partnerships with WHO and UN Water to  
83 focus research in order to coordinate operations in vulnerable aquatic ecosystems which contribute  
84 most to the development of antibiotic resistance in waterways;  
85
- 86 7. *Encourages* Member States to monitor the use of antibiotics within aquaculture through GLASS and  
87 to limit their use to necessary production measures to ensure the sustainability of domestic and  
88 international fisheries;  
89
- 90 8. *Further invites* Member States to collaborate with the International Coral Reef Initiative in strategizing  
91 to contain the antibiotics found in aquatic environments at the national level through their 'Framework  
92 for Action' program that have affected one-third of the Great Barrier Reef;  
93
- 94 9. *Affirms* the partnership between SIDS and the FAO subcommittee on aquaculture;  
95
- 96 10. *Requests* Member States to cite water-related business risks such as water scarcity and flooding as  
97 stipulated by the UNGC in order to encourage voluntary contributions from the private sector to WHO,  
98 intended to carry out antibacterial reduction efforts such as ambassador programs and  
99 bioremediation in aquatic environments.

**Code:** WHO/1/2

**Committee:** United Nations High Commissioner for Refugees

**Topic:** Providing Adequate Shelter for Refugees and Internally Displaced Persons

---

1 *The World Health Organization,*  
2  
3 *Acknowledging* Article 1 of the *Charter of the United Nations* (1945) on the right to sovereignty when  
4 addressing transparency in strengthening implementation of multilateral frameworks, which complements  
5 World Health Organizations (WHO) 1948 Constitution to maintain and uphold global health,  
6  
7 *Guided by* the *2030 Agenda for Sustainable Development* (2015), specifically Sustainable Development  
8 Goal (SDG) 3 Target 8 which outlines the importance of achieving universal health coverage for all to  
9 develop and maintain crucial health services, which aid in limiting the spread of antibiotic resistance  
10 (ABR),  
11  
12 *Noting* that developing Member States will need assistance to formulate and implement better strategies  
13 to combat Antimicrobial Resistance (AMR), as well as the Official Development Assistance to distribute of  
14 0.7% of Global National Income to provide aid towards developing Member States as stated in General  
15 Assembly resolution 26/25 (1970),  
16  
17 *Emphasizing* the Global Vaccine Action Plan 2011-2020 framework which creates more equitable access  
18 to existing vaccines for people in all communities as the integration of vaccines is one of the most cost-  
19 effective tactics to promote and maintain general health decreasing the risk of AMR,  
20  
21 *Taking note of* the Global Action Plan for Antimicrobial Resistance which outlines five crucial objectives to  
22 combating AMR such as optimizing the use of antimicrobial agents as the lack of optimization furthers the  
23 spread of ABR,  
24  
25 *Underscoring* the resolution WHA/70/L.32 and its efforts to consider vulnerable areas that lack legislation  
26 and programs, for without these health policies international peace and security will be threatened,  
27  
28 *Observing* the positive results of the World Antibiotic Awareness Week, which was established by  
29 resolution WHA/68.7, through the implementation of programs that educate on the role antibiotics have  
30 within the international community,  
31  
32 *Fully aware* of the difficulties regarding the use of antibiotics in developing countries for agricultural  
33 means as outlined in the FAO Action Plan on Antimicrobial Resistance from 2016-2020 and Codex  
34 Alimentarius established by the WHO and the FAO on the limitation of antibiotic use in agriculture,  
35  
36 *Recognizing* the World Health Organization's *Antibiotic Resistance: Multi-Country Public Awareness*  
37 *Survey* (2015) that states ABR is not given adequate levels to media attention, thus causing  
38 misinformation and unknowing to people affected, such as patients or consumers,  
39  
40 *Confident* with WHO's collaboration with Drugs for Neglected Diseases initiative in the development of  
41 Global Antibiotic Research and Development Partnership which aims to develop and deliver new  
42 treatments for bacterial infections where drug resistance is present or emerging,  
43  
44 *Observing* the work of the WHO Emergency Health Program Beyond Borders, which has continuously  
45 demonstrated its capabilities in limiting the outbreak of illnesses,  
46  
47 *Noting with satisfaction* the previous success of WHO's Package of Essential Non-Communicable  
48 Disease Interventions for Primary Health Care in Low Resource Settings (PEN) in Southeast Asia for  
49 providing early detection of disease, which mitigates life-threatening complications and improves the

50 quality of care and simple indicators to measure the performance of health services given the availability  
51 of a minimum set of technologies and essential medicines using cost-effective investments,  
52

53 *Further noting* the importance of the role that regional organizations and international organizations as  
54 stated by the Interagency Coordination Group on Antimicrobial Resistance (IACG) possess in combating  
55 ABR,  
56

57 *Deeply conscious* of the continued need for antibiotics in the veterinary field, Member States are  
58 encouraged to emulate programs such as Innovative Veterinary Solutions for Antimicrobial Resistance  
59 (InnoVet-AMR) and in collaboration with the Network of Aquaculture Centers in Asia-Pacific, focusing on  
60 strengthening capacities, policies, self-assessment, and National Action Plans on prudent and  
61 responsible use of antimicrobials in fisheries,  
62

63 *Recognizing* the important role that Non-Governmental Organizations (NGOs), such as the International  
64 Federation of Red Cross and Red Crescent Societies (IFRC), play in the international community  
65 specifically in responding to public health initiatives, programs, and crises,  
66

- 67 1. *Encourages* Member States to increase some information and sharing between United Nations (UN)  
68 agencies, national and international organization such as South Eastern European Health Network  
69 (SEEHN) for stronger coordination to shorten response times;  
70
- 71 2. *Expresses* the hope that Member States collaborate with the WHO to create national health policies  
72 and plans that address providing universal health coverage to close the gaps between individual  
73 Member States' health priorities and achieve SDG 3 by the regional coalitions such as *the European*  
74 *Center for Disease Prevention and Control*, the Association of Southeast Asian Nations (ASEAN)  
75 Regional Cooperation in Communicable Diseases and Pandemic Preparedness and Response  
76 (ASEAN RCPR), and the Africa Centers for Disease Control and Prevention to assess accountability  
77 and surveillance mechanisms using intergovernmental dialogue to ensure sustainable development  
78 for future populations;  
79
- 80 3. *Recommends* all willing and able Member States to meet the 0.7% standard of Official Development  
81 Assistance contribution towards the UN used to aid Member States in responding to public health  
82 events;  
83
- 84 4. *Invites* all able and willing Member States and NGOs, such as the Global Alliance for Vaccines and  
85 Immunization and the Bill & Melinda Gates Foundation, to collaborate towards the integration and  
86 distribution of vaccines to all communities, especially rural areas, as the lack of immunization  
87 campaigns increases the spread of AMR globally;  
88
- 89 5. *Reiterates* the modification of policies for a country-level approach through the FAO Assessment Tool  
90 for Laboratories and Antimicrobial Resistance Surveillance Systems;  
91
- 92 6. *Suggests* cooperation between local government entities and regional NGOs by calling attention to  
93 the IFRC, Partners in Health, UN Volunteer program and Project HOPE to achieve the SDG 16 for  
94 communities to function independently and sustainably;  
95
- 96 7. *Strongly urges* the adoption of an effective waste disposal system through logistical and technical  
97 coordination akin to the Infect Control 2020 that initiates the surveillance and sanitation of antibiotic  
98 water residues in various bodies of water to mitigate the spread of ABR;  
99
- 100 8. *Supports* the expansion to expand the duties of epidemic and disease preparedness initiatives to  
101 consider their imperative role in the issue of AMR by organizing training centers for technical skills  
102 seminars on quarantine processes, drug production, and lab support cooperating with the distribution  
103 of drugs and microbial research infrastructures for neglected or reemerging pathogens;  
104

- 105 9. Asks the Global Antimicrobial Resistance Surveillance System (GLASS) to work in cooperation with  
106 WHO Regional Offices in creating a guideline for tracking and surveying the optimization of  
107 antimicrobial agents and ABR patterns in all regions and producing a regional response to this  
108 emerging and reemerging threats;  
109
- 110 10. Expresses the hope for the promotion of publicity on AMR material on a national and international  
111 level regarding issues such as:  
112
- 113 a. Suggesting the use of traditional and modern mass media to promote better understanding  
114 and awareness of ABR to mitigate and reduce the issue and related epidemics;  
115
  - 116 b. Encouraging programs that mirror the *Rapid Deployment Expert Group to Combat Health*  
117 *Threats* and *Epidemic Control for Volunteers* toolkit to educate rural populations who do not  
118 have immediate access to media on the dangers and risks of AMR;  
119
  - 120 c. Advocating school curriculums to include ABR awareness in science and health classes;  
121
  - 122 d. Providing clear and widespread awareness campaigns in hospitals and working closely with  
123 doctors and pharmacists to ensure patients understand the risks associated with the misuse  
124 of antibiotics;  
125
- 126 11. Encourages to increase the promotion of the information and technology sharing between  
127 international organizations such as SEEHN and Member States in order to shorten effective response  
128 times for public health emergencies;  
129
- 130 12. Further invites Member States to create and implement applicable cost-effective plans regarding  
131 AMR that Member States can adapt and implement under the purview of UN Industrial Development  
132 Organization, the UN Commission of Population and Development, and the UN Environment  
133 Programme;  
134
- 135 13. Recommends all Member States to provide appropriate and clear labeling on food items when  
136 antibiotics are used in production outlined within SDG 12 addressing Responsible Consumption and  
137 Production;  
138
- 139 14. Endorses the adoption of the One Health Approach established by WHO, FAO, and the Organization  
140 for Animal Health (OIE) to address key areas of improvement to incorporate One Health Approaches  
141 and recommends partnerships with NGOs to ensure sustainable development.

**Code:** WHO/1/3

**Committee:** The World Health Organization

**Topic:** Antibiotic Resistance as a Threat to Global Health

---

1 *The World Health Organization,*  
2  
3 *Recognizing* the World Health Organization (WHO) and World Trade Organization (WTO)'s research  
4 awareness initiative Antimicrobial resistance- a global epidemic, stating that antibiotic usage has  
5 increased drastically due to international trade and an increasingly globalized world,  
6  
7 *Guided by* General Assembly resolution 71/211 (2017) on "International cooperation to address and  
8 counter the world drug problem," which calls for Member States to establish effective and comprehensive  
9 approaches to confront the misuse of drugs and antibiotics within healthcare systems,  
10  
11 *Citing* General Assembly resolution 72/139 (2017) on "Global health and foreign policy: addressing the  
12 health of the most vulnerable for an inclusive society," which acknowledges that certain Member States  
13 incorporate public healthcare systems where health care and pharmaceuticals are provided through the  
14 government,  
15  
16 *Recalling* World Health Assembly (WHA) resolution 67/25 (2014), which urges Member States to slow the  
17 spread of antibiotic resistant bacteria in the efforts to improve health and health equity,  
18  
19 *Taking note of* WHO's development of National Medicines Regulatory systems (MRAs), established in  
20 2007 under the WHO Data Collection tool to control the distribution and regulate the utilization of medical  
21 tools, vaccines, and antibiotics,  
22  
23 *Highlighting* that independent medical companies require regulation to ensure their product is compliant  
24 with the International Health Regulations (IHR), which aim to provide public health responses while  
25 avoiding unnecessary interference with international trade,  
26  
27 *Drawing attention* to the WHO's Tobacco Free Initiative (TFI) which outlined the lack of transparency  
28 within the medical industry preventing consumers from understanding the consequences of the improper  
29 use of drugs and antibiotics,  
30  
31 *Concerned by* the lack of awareness related to the threats that poor sanitation and hygiene have on  
32 antimicrobial resistance within the global population, such as an increased spread and higher  
33 concentration of resistant bacteria as cited by WHO's Water, Sanitation, and Hygiene (WASH) at the  
34 WHA in 2015,  
35  
36 *Conscious of* the need to expand on existing regulations regarding the quality and correct usage of  
37 antibiotics medication, such as WHO's policy package which addresses the issue of unauthorized  
38 dispensing of antimicrobials and the proper usage of said antibiotics,  
39  
40 *Emphasizing* the over prescription of antibiotics by licensed physicians leads to an exacerbated rate at  
41 which resistance develops among certain microbes, as was noted in a study conducted by the Center for  
42 Disease Control and Prevention (CDC),  
43  
44 *Underscoring* the importance of the World Antibiotic Awareness Week and its influence on raising  
45 awareness of antimicrobial resistance,  
46  
47 *Appreciating* WHO's annual World Health Summit, which convenes annually in Germany, and its purpose  
48 of improving global health and encouraging discussion of global health threats, specifically the emphasis  
49 on antimicrobial resistance in 2015,

101  
102  
103  
104
1. *Invites* Member States to draft and implement their own National Action Plans that follow the framework established by preexisting Global Action Plans relating to Antimicrobial resistance for:
    - a. Internally monitoring the distribution of antibiotics;
    - b. Halting the influx of unregulated drugs dispensed from private sector companies;
  2. *Requests* that Member States uphold their commitment to formulate effective and comprehensive policy to combat antimicrobial resistance in the face of the global health threats it presents by:
    - a. Utilizing already existing programs that are outlined by the CDC, such as the PulseNet program established to track the spread of bacteria throughout Member States;
    - b. Continuing to research effective means to combating antimicrobial resistance using predictive modeling to standardize data aggregation from national hospitals and laboratories to track accurate antimicrobial resistance (AMR) trends;
  3. *Suggests* Member States with government provided healthcare to monitor their administration of antibiotics and practice more sustainable methods of treating infections and disease through:
    - a. Reducing the scope of antibiotics administered to the population only to cases where clear bacterial infections exist;
    - b. Limiting the prescription of broad range antibiotics to individuals whose ailments can be treated by more narrow spectrum medicine;
    - c. Inhibiting the over-the-counter trade of antibiotics in order to prevent individuals from self-administering antibiotics for illnesses or infections that are not bacterial;
  4. *Encourages* Member States to hold private sector medical distributors accountable for the amount of antibiotics accessible to doctors and patients by inviting health care professionals to create an oversight committee within their health care system to:
    - a. Oversee the distribution of antibiotics in order to limit their accessibility;
    - b. Improve scientific collaboration between physicians and private sector professionals to limit the over prescription of antibiotics;
  5. *Recommends* Member States to implement medicinal regulation and control systems through the WHO Data Collection Tool to assess the necessity and accuracy of the antibiotics being diagnosed and distributed;
  6. *Proposes that* Member States consider implementing the IHR's Joint External Evaluation due to its:
    - a. Enhanced ability to improve preparedness by recommending a National Reference Laboratory where information regarding diagnostic results and epidemiological data should be updated and implemented;
    - b. Increased potential for detection and response capacity where laboratories can identify all pathogens and conduct molecular characterization;
    - c. Allocation of resources based on needs and findings, as a result of surveillance of infections in collaboration with stakeholders within the state;

- 105 7. *Recommends* Member States to implement legislation using the frameworks of preexisting AMR  
106 containment policies and control regulations by:  
107
- 108 a. Working with UN agencies such as the Food and Agriculture Organization to ensure that  
109 antibiotics are properly disposed of and therefore are not improperly used;  
110
  - 111 b. Implementing other preexisting disposal methods such as WHO's global policy for sound  
112 health care wastes management (HCWM);  
113
  - 114 c. Incorporating pharmaceutical supply chain transparency in order to avoid multiple distributors  
115 and to ensure supply does not exceed demand;  
116
  - 117 d. Focusing on lowering the number of individuals who do not finish their medication through  
118 clear and concise labeling on medication packaging that include its contents, responsible  
119 usage, and implications of misuse;  
120
- 121 8. *Recalls* the statistics found from TFI on the impact of detailed descriptions and pictures of the  
122 repercussions on tobacco use, Member States can:  
123
- 124 a. Support a global campaign to provide information, descriptions, and pictures regarding the  
125 harmful effects of the misuse of antibiotics;  
126
  - 127 b. Publicize and reiterate the danger and consequences that antibiotic resistance presents to  
128 public health;  
129
- 130 9. *Encourages* Member States to recognize WHO's policy of WASH in order to reduce the quantity of  
131 antibiotics in circulation by:  
132
- 133 a. Alleviating the heavy dependence on antibiotics by underscoring the benefits of practicing  
134 personal hygiene by way of establishing an agenda—suggested by the WHO to be adopted  
135 by Member States—through the UN World Antibiotic Awareness Weeks set to focus on  
136 hygiene;  
137
  - 138 b. Bolstering a standard set by the WHO regarding personal hygiene such as the *Guidelines on*  
139 *Sanitation and Health* by:
    - 140 i. Keeping in mind the possibility of contamination of infectious diseases or bacteria to  
141 lessen the necessity of antibiotics and consequently mitigate the detrimental effects  
142 of resistance;
    - 143 ii. Advocating for the installment of standards of training health, medical, and related  
144 professions—as specified in the mandate of the WHO—with respect to sustaining  
145 and developing sanitation procedures;
    - 146 iii. Increasing awareness in the scope of the household to uphold sanitation practices by  
147 way of developing health promotion interventions held within Member State health  
148 industries;  
149
- 150 10. *Recommends* Member States to reference public education programs such as the Epidemic Control  
151 for Volunteers toolkit to ensure that even rural communities have access to information about  
152 diseases, so afflicted citizens have and increased awareness about what prescription would be  
153 necessary;  
154
- 155 11. *Commends* the expansion of global awareness campaigns focused on antimicrobial resistance such  
156 as World Antibiotic Awareness Week through:  
157
- 158 a. Increasing global awareness of the threats of antimicrobial resistance through increased  
159 commentary and declarations by the WHO and other UN bodies;  
160

- 161 b. Creating a media campaign that will spark conversations about antimicrobial resistance and  
162 in turn generate awareness towards the threats antimicrobial resistance poses among  
163 consumers of antimicrobial medicines;  
164
- 165 c. Encouraging global leaders to acknowledge and discuss the dangers that antimicrobial  
166 resistance present to global security and health;  
167
- 168 d. Issuing a public declaration that 2019 is the year for Combating Antimicrobial Resistance;  
169
- 170 12. *Encourages* the World Health Summit to incorporate antimicrobial resistance as an area of emphasis  
171 every conference due to the rising public health threat it presents to global health in order to:  
172
- 173 a. Stimulate conversation between world leaders, Non-Governmental Organizations, and the  
174 private sector about antimicrobial resistance;  
175
- 176 b. Improve and encourage information and expertise sharing about effective solutions and  
177 programs that combat antimicrobial resistance;  
178
- 179 c. Increase awareness to the threats of antimicrobial resistance and increase media coverage  
180 of the issues that it presents;  
181
- 182 13. *Encourages* increasing the promotion of information and technology sharing between international  
183 organizations such as South Eastern European Health Network, The African Center for Global Health  
184 and Social Transformation, and the Asian eHealth Information Network, and Member States to  
185 shorten effective response times for public health emergencies by:  
186
- 187 a. Welcoming an open forum for Member States to discuss and highlight regional public health  
188 events regarding sustainable development, technology, and energy related solutions and  
189 advancements that contribute to combating AMR;  
190
- 191 b. Inviting Member States to Beijing in the year 2025 to address and assess the need for more  
192 allocated funding and voluntary contributions towards combating AMR in developing  
193 countries.

**Code:** WHO/1/4

**Committee:** The World Health Organization

**Topic:** Antimicrobial Resistance as a Threat to Global Health

---

1 *The World Health Organization,*  
2  
3 *Guided by the 2030 Agenda for Sustainable Development (2015) and Sustainable Development Goal*  
4 *(SDG) 3, which ensures healthy lives and promotes well-being for all and the manner which in it*  
5 *correlates to the threat of global health arising from antibiotic resistance (AMR),*  
6  
7 *Recalling World Health Assembly (WHA) resolution 68/7 (2015) which proposed the *Global Action Plan**  
8 *on Antimicrobial Resistance and the importance of incorporating One Health approaches as these leads*  
9 *being able to effectively detect, respond to and prevent outbreaks of zoonosis and food safety problems,*  
10  
11 *Guided by the *International Covenant on Economic Social and Cultural Rights* of 1966, which states in*  
12 *article 12 that all peoples have the right to the highest attainable standard of health,*  
13  
14 *Recognizing WHA resolution 54/11 (2007) which provides the World Health Organization`s (WHO)*  
15 *strategy on the safe use of medicines, including antibiotics, to maintain a global standard to combat AMR,*  
16  
17 *Recalling the *Food and Agricultural Action Plan on Antimicrobial Resistance 2016-2020* which calls for an*  
18 *increase in awareness of antimicrobial resistance and safe practices within the agricultural sector to*  
19 *mitigate AMR,*  
20  
21 *Alarmed by the statistics reported by the 2009 *WHO Country Pharmaceutical Situations* which revealed*  
22 *that half of all Member States have not yet implemented a campaign for public education on the use of*  
23 *antibiotics,*  
24  
25 *Calling attention to the need for awareness within the agriculture and livestock industry, through the Food*  
26 *and Agricultural Organization (FAO)`s regional and national offices as 75 to 90% of antimicrobials used in*  
27 *livestock are excreted, mostly unmetabolized, therefore contaminating the soil and water ways,*  
28  
29 *Following the *WHO Antimicrobial Stewardship* self-paced course that will help equip clinicians and*  
30 *healthcare workers who prescribe antimicrobials with adequate knowledge and tools to improve the use*  
31 *of essential medications,*  
32  
33 *Taking into consideration WHA resolution 67/25 that highlights the importance of monitoring use of*  
34 *antibiotics in animals as this leads to an increase of AMR within consumers,*  
35  
36 *Noting with support the Global Antimicrobial Resistance Surveillance System (GLASS)`s aim to support*  
37 *global surveillance and research in order to strengthen the evidence base on antimicrobial resistance in*  
38 *order to lessen the threat of AMR,*  
39  
40 *Calling attention to the collaboration between FAO and WHO`s work of the Codex Alimentarius*  
41 *Commission on protecting consumer health and ensuring fair practices in the food trade,*  
42  
43 *Noting with concern that the black-market industry is a contributor to antibiotic resistance as highlighted*  
44 *by the *WHO Report on Surveillance of Antibiotic Consumption 2016-2018,**  
45  
46 *Acknowledging the impact of the black-market industry on developing countries as stated in the United*  
47 *Nations Office on Drugs and Crime *World Drug Report 2018,* which estimated that 30 percent of drugs*  
48 *are sold under black markets in developing states, as opposed to only 1 percent in industrialized*  
49 *countries,*

Aware of WHO's recommendation in the 2017 *WHO Guidelines on the Use of Medically Important Antimicrobials in Food-Producing Animals* for farmers in the food industry to stop using antibiotics routinely to promote growth and prevent disease in healthy animals,

*Recognizing the antibiotic prescribing and resistance: Views from Low and Middle Income Prescribing and Dispensing Professionals (2017)*, in which WHO found as many as 33% of antibiotics may be excessive due to their broad usage,

*Recognizing WHO's Framework of Promoting the Health of Refugees and Migrants (2017)* in its contribution to improve global public health by addressing the health of refugees and migrants,

*Emphasizing the pioneered Guidelines for the prevention and control of carbapenem-resistant Enterobacteriaceae, Acinetobacter baumannii and Pseudomonas aeruginosa in health care facilities (2017)* which highlights public health international concern to bring attention to the threat of AMR,

*Considering the Joint Interagency Antimicrobial Consumption and Resistance Analysis report by the European Centre for Disease Prevention and Control, along with other regional organizations, which identifies the correlation between veterinary antibiotic use in the livestock industry and antibiotic resistance,*

*Recognizing the Status of Over the Counter (OTC) Rulemaking coordinated by the United States Food and Drug Administration for classifying medications as OTC's to ensure that antibiotics can only be prescribed by general practitioners' (GP),*

*Noting with concern that recent findings reported in the Journal of Antimicrobial Chemotherapy show that 50% of all antibiotic prescriptions for children given by GP are excessive,*

1. *Calls upon* Member States to promote healthy lives and well-being for all as recognized in SDG 3 and WHO's constitution, with special consideration to developing countries;
2. *Encourages* Member States to develop and implement National Action Plans (NAPs), aligned with WHO's *One Health Approach*, in cooperation with private health industries and governmental bodies to address needs at the national level;
3. *Invites the* United Nations Development Programme to provide model NAPs on Antimicrobial resistance in line with the *Global Action Plan on Antimicrobial Resistance*, as this will allow all peoples to attain the highest standard health;
4. *Supports* WHO's cooperation with regional health ministries in practicing the restriction of the excessive use of antibiotics by requesting an annual report on antibiotic prescriptions from regional health ministries to decrease the threat of AMR;
5. *Invites* the FAO to institute programmes in conjunction with WHO to hold community workshops on what antimicrobial resistance is and safe agricultural practices to mitigate the spread of antimicrobial resistance through the agricultural sector;
6. *Recommends* Member States to encourage private industries to decrease the quantity of antibiotics used in the meat industry as this contributes to AMR within peoples;
7. *Recommends* moving away from the use of broad-spectrum antibiotics against a wide range of pathogens, and instead promoting the use of narrow-spectrum antibiotics to limit immunization of bacterial strains, and upon potential infection, ensuring, infected patients are isolated and treated separately to minimize the potential for the bacteria to spread to other patients;

- 105 8. *Requests* the establishment of a global data base established through funds by voluntary  
106 contributions by Member States to be overseen by WHO in conjunction with the World Organization  
107 for Animal Health (OIE) to monitor the distribution of antibiotics to be used in livestock:  
108
- 109 a. Building upon the OIE- FAO-WHO- collaboration in order to strengthen global knowledge of  
110 the risk of using antibiotics in livestock;
  - 111
  - 112 b. Encouraging the implementation of international standards regarding the distribution of  
113 antibiotics;
  - 114
- 115 9. *Encourages* the creation of a sub-committee of GLASS headed by a WHO representative to  
116 implement a test and rank system to make the presence of antibiotics in food products public  
117 information by:  
118
- 119 a. Appointing test administer trainings through a collaboration with the FAO who will consist of  
120 members from each Member State, that will annually conduct testing on their respective  
121 Member States food and agriculture products;
  - 122
  - 123 b. Working alongside the FAO and Member States agriculture departments to accomplish a  
124 multilateral approach to the overuse of antibiotics in food products by publishing an annual  
125 report based on the finding of the test;
  - 126
  - 127 c. Pursuing a multi-sectoral approach to decrease the use of antibiotics as growth promoters in  
128 animals slowing the spread of antimicrobial resistance within the population;
  - 129
- 130 10. *Advises* Member States to adopt available codes established by the Codex Alimentarius Commission  
131 such as the 3-MCPD which approve networks to reducing contaminants in refined oils, found in infant  
132 formula that the Joint FAO/WHO Expert Committee on Food Additives report pose certain risks to  
133 consumer health;  
134
- 135 11. *Urges* industrialized Member States to educate its citizens on the threat of the black market, and to  
136 model the plans outlined in the European Union (EU) Action Plan on Drugs 2017-2020 by:  
137
- 138 a. Encouraging states to detect and dismantle illegal activity within the pharmaceutical sphere;
  - 139
  - 140 b. Calling for states to adopt key indicators on antibiotic drugs, to better identify counterfeit  
141 substances;
  - 142
  - 143 c. Inviting states to strengthen and monitor education and information-sharing surrounding black  
144 market threats;
  - 145
- 146 12. *Recommends* implementing educational programmes amongst communities within developing states,  
147 over seen by WHO` s Surveillance and Monitoring systems which seek to, educate communities both  
148 on the dangers of consuming black-market antibiotics; as well as on detecting counterfeit antibiotics  
149 with the use of technologies;  
150
- 151 13. *Calls for* a top-down AMR education and training program endorsed by WHO, to be integrated into  
152 Member States national health programs, in accordance with the comprehensive Center for Disease  
153 Control *Action Plan Against Antimicrobial Resistance* (2012) to:  
154
- 155 a. Create a global bi-annual conference for all pharmaceutical companies to educate, train and  
156 increase accountability, using the sustainable and controlled manufacturing idea proposed by  
157 the World Antimicrobial Resistance Congress by holding conferences every 6 months to  
158 assess the steps and actions taken by these companies to increases awareness and  
159 knowledge on AMR within their own company infrastructure;
  - 160

- 161 b. Implement food and drug regulatory bodies in each Member State to give awareness training  
162 and attendance to such conferences for all companies and workers involved in the  
163 manufacturing and distribution of antibiotics;  
164
- 165 c. Encourage AMR training programs to be included into credential programs for doctors,  
166 physicians, nurses and any health practitioners;  
167
- 168 d. Make sure such training programmes are adopted by both domestic and non-domestic  
169 healthcare workers such as those found in Non-governmental organizations (NGOs);  
170
- 171 e. Stress that patients are offered the black box warning that gives patients adequate  
172 information on prescribed drugs prior to the issuing of any antibiotic, be given either by a  
173 physician or pharmacists, as is observed;  
174
- 175 14. *Urges* Member States to engage in educational programmes that advocate for the reduction of  
176 antibiotics in food producing animals to reduce AMR in animals by up to 39% as noted in WHO's  
177 Guideline;  
178
- 179 15. *Emphasizes* the incorporation of all relevant United Nations bodies to review guidelines and training  
180 to physicians in order to ensure proper amounts of medication as well as appropriate medication  
181 being prescribed with:  
182
- 183 a. The implementation of a universal standard which centralizes treatment regimens provided to  
184 patients by physicians following WHO's Guide to Good Prescribing,  
185
- 186 b. The synchronization of strong support from governments, pharmaceutical companies, and  
187 distribution programs through NGOs, the required information may be implemented  
188 throughout rural regions as well as local communities for the required information to reach  
189 physicians and medical institution that provide care using antibiotics,  
190
- 191 c. The recommendation for government and medical institutions to implement these treatment  
192 regimens in the training, certification, and licensing of medical professionals;  
193
- 194 16. *Draws attention* to the equitable inclusion of refugees by increasing the United Nations High  
195 Commission on refugees work within refugee camps to make sure that refugees understand their  
196 rights as global citizens and to make sure that refugees are included within NAPs on AMR as  
197 refugees are also susceptible to AMR;  
198
- 199 17. *Strongly advises* Member States to collaborate with the FAO in the creation of a global guideline for  
200 that emphasizes in the labeling and monitoring of food and livestock that contains antibiotics as this  
201 leads to an increase awareness of AMR within consumers;  
202
- 203 18. *Aims* to promote the use of narrow-spectrum antibiotics in line with recommendations as proposed by  
204 the EU in WHO's bulletin entitled *Negotiating Prices of Drugs for Rare Diseases* in cases where a  
205 specific pathogen is detected to increase versatility in patients;  
206
- 207 19. *Invites* Member States to use the *Status of OTC Rulemaking* as a model framework to classify drugs  
208 by:  
209
- 210 a. Researching mortality rates caused by the use of unnecessary prescriptions;  
211
- 212 b. Encouraging national accountability guidelines for the mislabeling of antibiotics as OTC's;  
213
- 214 20. *Invites* Member States to work with WHO to create a tailored training program by working with  
215 regional and national health ministries modeled after the policy *Culture Matters: using a cultural*

216  
217

*contexts of health approach to enhance policy-making (2017)* that takes into consideration the different backgrounds of individuals worldwide as all peoples are affected with AMR in all regions.
