Code: WHO Resolution 1-1 Committee: World Health Organization Subject: Addressing Vaccine Delivery and Disease Eradication Efforts

1 2 3	<i>w</i> 0	he World Health Organization (WHO) Constitution which states that the enjoyment attainable standard of health is one of the fundamental rights of every human
4	8,	
5 6	• •	the <i>Rapid Risk Assessment of Acute Public Health Events</i> , which mentions that the ly has an inability to respond rapidly to health threats,
7		
8 9	0	purpose of the Global Outbreak Alert and Response Network (GOARN) is to long-term epidemic preparedness, thus, an expansion of GOARN would incentivize
10 11	research, exp	edite aid delivery, and increase education on health risks,
12	Acknowledgi	<i>ng</i> the wide-spread use of new and under-utilized vaccines that support the
12 13 14	Millennium I	Development Goal 4 of reducing global childhood mortality by two-thirds by 2015 se of programs used by New Under-utilized Vaccine Initiative (NUVI),
14	unougn me u	se of programs used by New Onder-utilized Vacenie mitiative (NO VI),
16	0 0	the PAHO Resolution CD.44.R1 which created Vaccination Week awareness in
17	South Americ	ca which currently vaccinated over 550 million citizens,
18		
19 20	The World H	ealth Organization,
21	1) Reque	ests the deployment of real-time monitors to curtail the spread of epidemics before
22	· •	an evolve into pandemics by:
23	5	1 2
24 25		proving risk assessment communication by providing all Member States currently presented in the GOARN the ability to receive real-time tracking of outbreaks to:
26		
27 28	i.	Ascertain growing trends, which:
20 29		(1) Gives the state physical knowledge of where outbreaks are occurring in real-
30		time,
31		
32		(2) Provides insight that shall increase the demand to incentivize research and
33		development of better technology,
34		
35		(3) Gives the WHO more knowledge of the amount of attention each outbreak
36		requires,
37		
38	ii.	Provide more accurate data,
39		
40	iii.	Allow for better treatments and/or quarantine efforts to quell outbreaks, by:
41 42		(1) Prioritizing eradication and/or containment efforts,

43		
44		(2) Suggesting that locales, which are beyond a plausible eradication threshold, to
45		be quarantined,
46		
47		(3) Giving locales, within a reasonable margin, mechanisms to eradicate
48		preventable diseases,
49		
50		(4) Allowing for a more macroscopic approach in dealing with outbreaks by
51		analyzing data points to forecast where further outbreaks will occur,
52		
53		(5) Giving projected areas proper treatment and vaccinations to stop the outbreak
54		from spreading further,
55		
56		b. Replacing old risk assessment policies and definitions with new policies and
57		definitions that are more benefiting of this new structure,
58		
59		c. Use these new policies and definitions to advocate for more cohesion between
60		communication, treatment, and eradication efforts,
61		
62		d. Having a biannual meeting with representative Member States addressing the voices
63		of their regional WHO offices,
64		
65		e. Providing information for a biannual report from each regional WHO office detailing
66		the proliferation, eradication, and containment of prominent diseases for each region,
67		
68		f. Suggesting everything funded by the Global Fund or Central Emergency Response
69		Fund (CERF) in conjunction with private companies such as Yandex;
70		
71	2)	Urges the strengthening of New and Under-utilized Vaccine Initiative (NUVI) to include:
72		
73		a. The Development of newer and less expensive vaccines,
74 75		b. The recognition to other often neclected discourse which include but are not limited to.
75 76		b. The recognition to other often neglected diseases which include but are not limited to: Japanese Encephalitis, Diphtheria, Tetanus, Pertussis, Measles and Tuberculosis;
70 77		Japanese Encephantis, Dipitulena, Tetanus, Pertussis, Measies and Tuberculosis,
78	3)	Encourages the implementation of a newly-developed vaccine refrigeration system which
78 79	5)	does not require electricity nor fuel and allows for the delivery of the temperature
80		sensitive yet inexpensive and more effective live Polio vaccine;
81		sensitive yet mexpensive and more effective five fond vacenic,
82	4)	<i>Requests</i> the creation of vaccine centers within each Member State to:
83	т)	a. Overcome cultural barriers and stigmas regarding vaccines and modern health methods
84		through:
85		
86		i. Employing local governmental and religious leaders,
87		r 7 6 6
88		ii. Acquiring the support of local leaders to ensure the legitimacy of the centers,

89	
90	iii. Facilitating more effective distribution of vaccines at a local level to target
91	populations,
92	
93	iv. Further reinforce trust and reputability in global health organizations;
94	
95	5) <i>Recommends</i> the modeling of vaccination week awareness in Latin America which
96	Implements annual hemispheric vaccination delivery, which targets high-risk populations
97	groups and under served areas.

Code: WHO Resolution 1-2 Committee: The World Health Organization Subject: Addressing Vaccine Delivery and Disease Eradication

 <i>Acknowledging</i> the need to set Member States on a path to self-sufficiency, <i>Stressing</i> the importance of a three-tier approach focusing not only on an international approach but also on a regional and local approach, <i>Realizing</i> the potential for collaboration between the World Health Organization (WHO), Non-Governmental Organizations (NGOs), and other global health actors, <i>Affirming that</i> there are regional-specific health issues that differ across the globe, <i>Recognizing</i> the effectiveness of the Pan American Health Organization's (PAHO) Revolving Fund in making quality medical supplies at lower prices for the Latin American region, <i>Fully aware</i> that many diseases can be prevented through the simple gain of knowledge and education on proper sanitary methods, <i>Understanding</i> the need to observe the efficiency and effectiveness of various programs implemented by WHO bodies, <i>The World Health Organization (WHO)</i>, <i>Calls for</i> further emphasis to be placed on education, medical information transparency, vaccination research and development by Member States of the WHO; 	1 2	Alarmed by the dangers of rapidly spreading disease and the difficulty in vaccine delivery,
 <i>Stressing</i> the importance of a three-tier approach focusing not only on an international approach but also on a regional and local approach, <i>Realizing</i> the potential for collaboration between the World Health Organization (WHO), Non-Governmental Organizations (NGOs), and other global health actors, <i>Affirming that</i> there are regional-specific health issues that differ across the globe, <i>Recognizing</i> the effectiveness of the Pan American Health Organization's (PAHO) Revolving Fund in making quality medical supplies at lower prices for the Latin American region, <i>Fully aware</i> that many diseases can be prevented through the simple gain of knowledge and education on proper sanitary methods, <i>Understanding</i> the need to observe the efficiency and effectiveness of various programs implemented by WHO bodies, <i>The World Health Organization (WHO)</i>, <i>Calls for</i> further emphasis to be placed on education, medical information transparency, vaccination research and development by Member States of the WHO; <i>Seeks</i> the increased involvement of the private-sector within Member States to implement the distribution and development of vaccines, improve sanitation practices, and provide various other medical necessities to: 	3	A draw ladaing the need to get Member States on a neth to calf sufficiency

a) Promote cooperation within the global health community,		practices, and provide various other medical necessities to:
35		a) Promote cooperation within the global health community,
36 b) Strengthen nation-state economic infrastructure,		b) Strengthen nation-state economic infrastructure,
37		a) Stimulate economic growth within their respected nations.
38 c) Stimulate economic growth within their respected nations;39		c) summate economic growth within their respected hattons;
40 3. <i>Recommends</i> a more centralized, comprehensive medical information		3 <i>Recommends</i> a more centralized comprehensive medical information
41 database to:		
42		

43 44		a) Make available information related to vaccine delivery and disease eradication strategies,
45		
46		b) Be provided to on a voluntary basis by all willing Member States,
47		
48		c) Ensure collaboration between the World Health Organization and
49		other health-related NGOs;
50		
51	4.	<i>Encourages</i> bilateral and multilateral cooperation between national, regional,
52		and international bodies to share:
53		
54		a) Successful health strategies,
55		
56		b) Medical technology,
57		
58		c) Effective methods of distribution;
59		
60	5.	Calls upon Member States to work with their WHO regional office to focus
61		on regional specific health issues;
62		
63	6.	<i>Encourages</i> regional bodies to create revolving funds based on the model of
64		the PAHO Revolving Fund to make quality medical supplies at lower prices
65		available to Member States within their respected regions;
66		
67	7.	<i>Urges</i> the creation of a grassroots based education program to be developed
68		by local health officials with the aid of regional health bodies targeting both
69		rural and urban areas with the intent to address:
70		
71		a) Health precautions,
72		, , , , , , , , , , , , , , , , , , ,
73		b) Preventative measures,
74		
75		c) Locations for the receiving of aid,
76		
77		d) Effective waste management options,
78		2),,,,,,,
79		e) Environmental improvements;
80		, r
81	8.	Suggests adding to the agenda of the upcoming World Health Assembly the
82		issue of addressing the development of an oversight and health evaluation
83		body to ensure the effectiveness and efficiency of health programs.

		WHO Resolution 1-3
		ittee: The World Health Organization t: Addressing Vaccine Delivery and Disease Eradication Efforts
	~	
1 2 3		wledging the successes of the Global Polio Eradication Initiative (GPEI) in attempting to ate polio,
4 5 6 7		ing World Health Assembly resolution WHA27.57 which established the Expanded m on Immunization (EPI) and the accomplishments of the EPI in providing immunizations ly,
8 9 10		<i>nizing</i> the efforts made by World Intellectual Properties Organization (WIPO) regarding ng the costs of vaccines,
10 11 12 13		<i>conscious</i> of the need for stronger communication between all organizations involved in bal health community,
13 14 15	The W	orld Health Organization,
16 17 18 19	1)	<i>Emphasizes</i> the successful program produced by the GPEI for eliminating the impact of viruses on the global community, and seeking to use the GPEI as a model in other disease eradication efforts in the form of the proposed four step system:
20 21 22		a) First, targeting infant and newborns, inoculations are delivered in the early years of life,
23 24 25		b) Second, "national immunization days" are held to give populations a specific day to come to health centers to receive vaccinations:
26 27 28		i) Which are also accompanied by educational campaigns with the objective of educating a population on the importance of vaccinations,
29 30 31		c) Third, monitoring programs with laboratory and field technology that are used to monitor 'wild' virus instances to map out target areas,
32 33 34 35		 d) Finally, once transmission of the virus has been isolated, 'mop up' campaigns are implemented in order to complete the process of eliminating the virus from the human population;
36 37 38 39	2)	<i>Endorses</i> the expansion of the <i>WHO Essential Medicines List</i> to include crucial vaccines needed to insure expanded efforts to improve international health, including the Polio, Influenza, and Tetanus/Diphtheria vaccinations;
40 41	3)	Calls Upon WIPO to facilitate a summit to discuss:

42 43		a) Patents on vaccines and their effect on the ability to distribute proper dosages in eradication initiatives,
44		
45		b) Creating agreements in order to facilitate the production of generic vaccines to insure
46		that costs are manageable for international organizations,
47		
48		c) Promoting the continued efforts to expand technologies to insure that vaccines can be
49		delivered more effectively;
50		
51	4)	Approves the WHO's hosting of a summit, with the cooperation of WHO regional
52		offices, prominent Non-Governmental Organizations (NGOs), and other relevant UN
53		bodies to discuss:
54		
55		a) Improving methods of communication including:
56		
57		i) Information sharing,
58 50		(i) Menitoria and manufactoria income and income the solution of the solution has left whether
59 60		ii) Monitoring and reporting issues regarding outbreaks and other health related
60		issues,
61 62		b) Discussing alphal chiesting with the sime
62		b) Discussing global objectives with the aim:
63 64		i) To increase according and awareness of each organization's offerts
65		i) To increase cooperation and awareness of each organization's efforts,
66		ii) To develop methods to combine efforts to increase productivity;
67		ii) To develop memods to comome enorts to increase productivity,
68	5)	<i>Requests</i> the cooperation of the international community and pharmaceutical companies
69	5)	to more competitively price vaccines as well as provide more transparency in vaccine
70		production;
70		production,
72	6)	Strongly recommends the creation of an educational program with the intent to increase
73	0)	awareness within the global community of the need for new transportation methods for
73 74		vaccines by:
75		vacenies by:
76		a) Outlining what has been done and how as well as in what instances these methods
77		have been effective,
78		
79		b) Providing the current needs as well as possible methods for effective transportation of
80		vaccines,
81		
82		c) Producing incentives, in conjunction with the Economic and Social Committee, for
83		companies who provide new technologies for the transportation of medical supplies;
84		
85	7)	Urges Member States to adopt and implement a program similar to China's Alternatives
86	,	for Controlled Temperature Systems (ACTS) program in order to respond to the
87		problems of low-cost vaccine temperature storage systems through:

88		
89	a)	Providing long-term temperature sensitive vaccine storage options such as:
90	u)	To vicing tong term temperature sensitive vaceme storage options such as.
91		i) The use of silk proteins made from silkworm cocoons to stabilize vaccine
92		temperature in extreme cases of heat up to 110 degrees Fahrenheit for several
93		months,
94		,
95		ii) The utilization of sugar membranes, sucrose and trehalose, to suspend vaccines in
96		animation to then be dissolved and reanimated simply with water allowing the
97		vaccine to be stored at extremely high temperatures for 6 to 12 months,
98		
99		iii) The production and distribution of solar powered refrigerators made from easily
100		found materials, allowing these refrigerators to be built within most countries, and
101		also capable of being powered by biofuels in seasons and regions lacking
102		sunshine,
103		
104	b)	Providing short-term mobile storage options to facilitate the delivery of temperature
105		sensitive vaccines such as:
106		
107		i) Vacuum-sealed insulation panels to halt heat flow by 20 times as well as the same
108		amount of polyurethane foam,
109		
110		ii) Using the phase-changer insulation materials,
111		
112		iii) Silicon carbide and silicon dioxide nanoparticle coating to prevent heat
113		absorption;
114	0) 4(
115	8) Af	<i>firms</i> the need for protection of medical personnel by:
116		Descreting the Security Council on d Disconcenter and Internetional Security
117	a)	Requesting the Security Council and Disarmament and International Security
118 119		Committee to create and review initiatives regarding the safety of personnel in medical initiatives,
119 120		meurear minauves,
120	b)	Fostering a partnership with the World Resources Institute with the goal of utilizing
121	0)	geo-mapping through mobile communication devices to help secure the safety of
122		medical volunteers in the field.
123		

Code: WHO Resolution 1-4 Committee: World Health Organization Subject: Addressing Vaccine Delivery and Disease Eradication Efforts

Recognizing that Universal Health Care is a an effective means of providing health care
 services for all citizens in the International Community,

3

- 4 *Understanding* that some Member States may not have the capacity for universal health care,
- 6
- *Emphasizing* the importance of cooperation amongst Member States to achieve the
 utmost standards of health services,
- 9 10 The World Health Organization,
- 1) *Endorses* that Universal Health Care is a proven and effective means of providing
 health care services to citizens in the International Community,
- 14

11

15 2) *Encourages* Member States to consider the viable options that universal health careprovides,

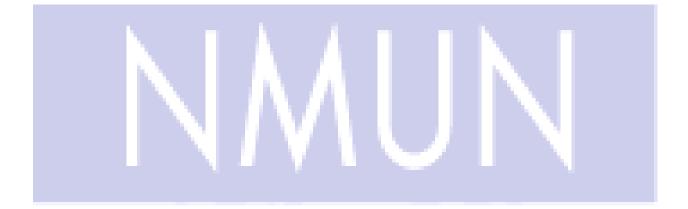

- 17
- 18 3) *Has resolved* upon request of the member state, to send WHO advisors to aid in the
- 19 implementation of successful universal health care systems.

20

Code: WHO Resolution 1-5 Committee: World Health Organization Subject: Addressing Vaccine Delivery and Disease Eradication Efforts

1 2	<i>Noting</i> the need to progress towards the distribution of health services to areas of limited access,
3	<i>Emphasizing</i> the need to for health resources and services to areas in which citizens are
4 5	incapable of regular access to health centers and vaccines,
6 7	<i>Seeking</i> for the creation of a campaign which will help provide information and funding to Member States to endorse and further the implementation of the Mobile Health Units (MHUs),
8	
9 10	<i>Taking notice</i> of the existing funds in place of these services from WHO and partnered NGOs such as United Nations International Children's Fund (UNICEF) and the International
11	Committee of the Red Cross (ICRC),
12	
13 14	<i>Recognizing</i> the successful implementation of MHUs by providing immunizations, health protections, disease screening, and physical and dental checkups in states such as Thailand,
15	Afghanistan, Brazil, Uganda, South Africa, and India,
16	
17	Acknowledging the recent success in Thailand in combating Malaria through vaccinations and
18	bed nets,
19	
20	Further Recognizing the success of UNICEF's program implemented in Afghanistan in 2006,
21 22	which provided pregnant women tetanus vaccinations, protection to the child as well,
23	The World Health Organization,
24	
25	1) <i>Recommends</i> the further implementation of MHUs through the creation of an initiative
26 27	called the Mobile Eradication and Distribution Initiative (MEDI) that will:
28	a. Reach Member States that have limited access to health services and health
29	education facilities on a case by case bases decided upon by the WHO regional
30	actors, specifically targeting women and children, but not limited to nor solely
31	encompassing this demographic,
32	
33	b. Provide health services through MHUs which will be called Mobile Medical
34	Miracles (MMM) under MEDI that will offer the following services:
35	Trinacies (Trinit) and Tribbi that will offer the fortowing set frees.
36	i. Testing and screening for a spectrum of health concerns, from minor
37	illnesses to communicable diseases,
38	minosses to communicative discuses,
39	ii. Vaccines needed for the treatment of illnesses specific to each region and
40	of global concern decided by the WHO actors and NGOs that are
41	regionally based,
42	Togronuity output,

43 44	iii. Education for women and children as a preventive measure and for promotion of healthy lifestyles,
45 46 47	iv. Health personnel trained with in regional blocks, from existing health care facilities within each member nations, and equipped with knowledge of
48 49	cultures, norms and social customs,
50 51	c. Work in accordance with global initiatives, regional WHO offices, local leaders and state wide non-governmental institutions such as; Global Program for
52 53	Vaccine and Immunization (GPV), Global Polio Eradication Initiative (GPEI), UNICEF and more specifically as an example Malaria Control (MAL),
54 55	d. Funded through the construction of the Global Campaign for Combating
56 57	Communicable and Non-communicable Diseases using the GPEI as a model to follow state sponsors and partnership initiatives including public and private fund.

Code: WHO Resolution 1-6 Committee: World Health Organization Subject: Addressing Vaccine Delivery and Disease Eradication Efforts

1 *Recognizing* regional specific initiatives to address global health issues through 2 multilateral cooperation, 3 4 Understanding the importance of education in order to adopt preventative measures 5 against disease. 6 7 Stressing the importance of local, regional, and global transparent networks that 8 collaborate to disseminate medical advances, 9 10 Acknowledging that national influenza pandemic preparedness plans are important for the 11 precaution of any pandemic outbreak within Member States, 12 13 *Keeping in mind* that global interactive mapping of disease outbreaks is used by various 14 organizations as a visual display of transparency but lacks sufficient information to be 15 useful and specific, 16 17 *Highlighting* the importance of addressing persisting issues and promoting global 18 cooperation through the international, regional, and local-grassroots levels to in turn 19 strengthen each layer internally and externally, 20 21 Alarmed by the scarcity of vaccines in regions throughout the world, 22 23 *Deeply concerned* with the lack of access to vaccines and health facilities in isolated rural 24 areas around the world, 25 26 *Further concerned* about the disparity of technology between countries, 27 28 The World Health Organization, 29 30 1) *Encourages* the facilitation of trade with the producer countries in order to obtain 31 and distribute the vaccines to the necessary areas; 32 33 2) *Calls upon* all Member States to improve infrastructure and communication to 34 improve the spread of health services where needed; 35 36 3) *Calls for* the strengthening of already existing regional offices to promote 37 communication, cooperation, efficiency, and the expansion of these offices to 38 reach previously underrepresented areas; 39 40 4) Urges Member States to implement the National Influenza Pandemic 41 Preparedness Plan fully within their respective regions; 42

43 44	5)	<i>Recommends</i> using an expanded concept of the WHO's global interactive maps to pinpoint regional and local outbreaks, in order to highlight goal initiatives
45		through:
46 47		a. Multilevel transparency,
48 49		b. State accountability on set goals,
50		
51		c. Local research and statistics,
52		
53 54		d. Visual representation of the funneling and dispersion of funding and resources,
55		
56 57		e. Using technology as a means of administering and maintaining current information;
58	-	
59	6)	Encourages Member States to monitor local production of vaccines;
60		
61 62		a. <i>Suggests</i> that the manufacture of storage supply and medical equipment
62 62		are properly facilitated;
63	7)	From basis of the importance of multiple health compatible as and moniton reasonab
64 65	7)	<i>Emphasizes</i> the importance of public health surveillance and monitor research
65 66		through:
66 67		Nonine courses
67 68		a. Vaccine coverage,
68 60		h Manitaning advance offects
69 70		b. Monitoring adverse effects,
70 71		c. Responding to laboratory failures;
71 72		c. Responding to laboratory failures;
72	8)	Calls for the monitoring of previous progress and setbacks of policies and
73 74	0)	initiatives through media and regional efforts enacted by the WHO;
74 75		initiatives through media and regional errors enacted by the write,
75 76	0)	Urges the least developed countries to utilize the international development
70 77))	associates in their efforts to support members financially;
78		associates in their errorts to support memoers infancially,
70 79	10	<i>Recognizes</i> that global health depends on widespread dissemination of vaccines
80	10	and disease prevention practices;
81		and discuse prevention practices,
82	11	<i>Calls for</i> global standards and strategies to implement "community immunity"
83	11,	programs including the adoption of set goals through the Global Immunization
84		Vision and Strategy (GIVS) and the ratification of the Country Cooperation
85		Strategy of 2012-2017;
86		
87	12	<i>Realizes</i> there is a need for an eradication strategy by
88	· ,	

89	a. Sharing the division of labor between the WHO and the GIVS,
90	
91	b. Utilizing the WHO to focus on the prevention of disease like Polio and
92	Malaria and having the GIVS focus on the curing of diseases such as
93	tuberculosis and river blindness,
94	
95	13) <i>Recognizes</i> that the viral outbreak of polio requires the full implementation of
96	strong partnership with the International Polio outbreak response standards
97	exemplified by the Global Polio Eradication Initiative (GPEI);
98	
99	14) Supports the improvement of the large –scale supplementary immunization
100	activities to sustain population immunity and to protect them against the possible
101	re-emergence of the most recent virus as well as new ones;
102	
103	15) Realizes the need for ports to ensure vaccine delivery to countries not within close
104	proximity to the region;
105	
106	16) Expresses hope for the promotion of universal health care and recognizes the
107	importance of such coverage.

Code: WHO Resolution 1-7 Committee: World Health Organization Subject: Addressing Vaccine Delivery and Disease Eradication Efforts

1 *Recalling* the positive effects of vaccinations upon a nation's health standards, and the work that 2 the WHO has done regarding their recent fight against the outbreak of polio in India, 3 4 *Emphasizing* the WHO's focus on Millennium Development Goal 5, regarding the improvement 5 of child and maternal health, in order to provide equal protection for the right for all newborns to 6 a life free from disease. 7 8 *Guided by* the recognition of efforts displayed by the WHO through the success of the Global 9 Polio Eradication efforts lea ding to the diminishing of polio by 99%. 10 11 Aware of the high demand for vaccines and the positive effect that further health education could 12 have upon that number, 13 14 *Desiring* the implementation of health awareness within the current public school systems, 15 16 *Noting* the success experienced by nations who disperse vaccines through the practice of 17 midwifery, 18 19 *Noting with deep regret* the lack of opportunity for midwives to operate effectively, and disburse 20 vaccines throughout the rural population, due to the lack of midwives within rural regions and 21 the lack of enforced regulations within midwife training facilities, 22 23 *Recalling* the effective use of immunizations at birth, and its potential impact on the lowering the 24 mortality rate, 25 26 Aware of the unequal distribution of healthcare education throughout many states in the global 27 system, 28 29 *Further Recalling* the positive effect that further health education has upon a state, 30 31 *Recognizing* the example set forth in Bangladesh with the proper implementation of tracking 32 vaccine deliveries, and its positive results, 33 Guided by the creation of small, cost effective clinics in some nations that currently deliver 34 35 vaccines. 36 Keeping in mind the dearth of clinics in developing nations, and the need for better 37 38 infrastructural organization to provide healthcare and vaccination accessibility, 39 40 The World Health Organization, 41 42 1) Suggests the formation of a committee to oversee and regulate midwife and physician 43 training facilities to better the retention of health care provisions by:

44	
45	a. Creating institutions that focus on training healthcare professionals such as
46	midwives to enable successful vaccine delivery,
47	
48	b. Providing adequate sterilized medical supplies for vaccination efforts,
49	
50	c. Seeking funding from various NGOs including but not limited to Doctors
51	without Borders, UNFPA, and also considering voluntary contributions from
52	Member States;
53	
54	2) Calls for the cooperation of lesser-developed countries to begin recruiting and training
55	midwives and other healthcare providers within their own borders to the purpose of:
56	
57	a. Employing women, youth, and other disadvantaged groups within many
58	communities thereby creating self-sustainable economies,
59	
60	b. Offering free education to local women who enroll in the midwifery program
61	
62	c. Allowing for the construction of healthcare facilities including but not limited
63	to clinics and sustainable hospitals;
64	
65	4) Authorizes the construction of small health clinics particularly throughout rural areas
66	as well as strengthening and improving health care systems already in place;
67	
68	5) Endorses collaboration from community leaders such as local NGOs in the
69	construction of these clinics:
70	
71	a. Working to promote health awareness through the partnership with community
72	leaders
73	
74	b. Aiming to establish better cohesion between leaders and the community
75	seeking to better understand local cultures and customs;
76	
77	6) Supports the creation of health standards to be regulated in the aforementioned clinics
78	using the model of the GIVS seeking to reach the ideal goal of "community of
79	immunity";
80	
81	7) Further invites the use of tracking cards, a card given at the local clinics, and stamped
82	for the immunizations that are received, to better measure the level of successful vaccine
83	delivery through individual participants, with specific attention to newborns;
84	
85	8) Reiterates the importance of local community leaders for spreading education and
86	information throughout their communities to establish cultural acceptance;
87	
88	9) Encourages doctors within specific regions to train potential emerging medical
89	professionals by:

90	
91	a. Providing existing medical staff with adequate and knowledgeable assistance,
92	
93	b. Ensuring the population with a greater availability of experienced staff,
94	
95	c. Giving emerging medical staff direct training through field experience;
96	
97	10) Affirms the implementation and reinforcement of health safety courses for all medical
98	staff to lessen the potential for illness or disease;
99	
100	11) Approves of an annual conference for medical staff which would include the
101	following further training for all medical staff employed at clinics and/or hospitals as
102	well as sharing of research between involved states and NGOs by:
103	
104	a. Aiming to be held at the regional offices of the WHO,
105	
106	b. Seeking to be fully funded and supported by the WHO to allow for doctors
107	within the region guaranteed attendance,
108	
109	c. Allowing participants to work closely with other more developed nations
110	bringing in medical staff and experts to oversee these conferences;
111	
112	13) Requests funding and cooperation from local governments as well as NGOs including
113	but not limited to Doctors without Borders, the Pan American Health Organization, the
114	United Nations Capital Development Fund, United Nations Population Fund, amongst
115	other related health organizations;
116	
117	14) Endorses the adequate provision of funding and training toward the education of
118	healthcare professions and trades, specifically the art of midwifery;
119	
120	15) Requests that more developed countries provide voluntary aid in the form of funding
121	and deployment of experienced medical professionals and midwives to designated
122	countries in order to further educate emerging medical professionals:
123	
124	a. Once the aforementioned programs become self-sufficient, we request the
125	transition of funding from the WHO and involved NGOs to individual member
126	states;
127	
128	16) Welcomes the cooperation from Member States in the fulfillment of the Millennium
129	Development Goals and the implementation through sustainable healthcare reform for the
130	purpose of a healthier environment for all persons.

Code: WHO Resolution 1-8 Committee: World Health Organization Subject: Addressing Vaccine Delivery and Disease Eradication Efforts

1 *Having considered* the need for collaborative efforts on vaccine distribution and delivery 2 between the World Health Organization (WHO), United Nations Children's Fund (UNICEF), 3 and other immunization partners, 4 5 *Fully aware* of the role that vaccination plays on maintaining the overall health and well-being of 6 the global population, 7 8 *Realizing* the challenges associated with the transportation, delivery, and storage of vaccines, 9 10 Calling upon the United Nations Development Programme (UNDP) to assist in bringing multi-11 lingual speakers into countries to facilitate health training programs and health awareness 12 campaigns and ensure efficient patient care and vaccine delivery, 13 14 *Encouraged* by the success of vaccination efforts made in Vietnam and Bangladesh, which have 15 increased the number of vaccinated individuals to over 90% and reduced child mortality rates to 16 well below the two-thirds objective of Millennium Development Goal (MDG) 4, 17 18 *Recognizing* the strategies of the Global Vaccine Action Plan in order to develop the vaccines 19 and immunizations for low-income and middle-income countries. 20 21 *Guided by* the principle of technology transfer to local vaccine manufacturing facilities, as a 22 measure to successfully accomplish MDG 4, the reduction of child mortality, 23 24 *Deeply concerned* with fiscal concerns in developing states' national immunization programs 25 and delivery systems, 26 27 *Emphasizing* the importance of education and community leaders' involvement in health 28 prevention at a local level, 29 30 Acknowledging the central role that all-encompassing staff training had in ensuring the success 31 of smallpox eradication, where epidemiologists underwent formal instruction on how to 32 approach and react to hypothetical outbreaks, 33 34 *Deeply concerned* by recent reports which have shown the increasing prevalence of polio in Angola, Chad, the Democratic Republic of the Congo, and several other countries due to 35 36 globalization, immigration, and human trafficking, 37 38 *Noting further* the Global Polio Eradication Initiative (GPEI) strategies established in 1985 by 39 the WHO and partnering bodies, 40

41 42 43	е	estim	<i>ed by</i> research conducted by the Global Immunization Vision and Strategy (GIVS) that ates spending an additional 1 billion USD annually on immunizations could save 10 million in the next decade,
44	_		
45	1	The V	Vorld Health Organization,
46	7	.	Manhan States to have an infine and fatern according to the family defined
47 48 49	1)		<i>rges</i> Member States to honor existing and future commitments to foreign development sistance associated with vaccine delivery by:
50 51 52		a)	Advocating health security as a prerequisite to national growth by providing life-saving vaccines,
52 53 54 55		b)	Considering the introduction of vaccine initiatives that administer multiple vaccines in one dosage into national immunization programs,
56 57 58		c)	Developing alternative vaccination administration techniques that bypass the use of sterile procedures,
59 60 61		d)	Enhancing communication among NGOs and private organizations to provide greater financial resources;
	2)	Cal	<i>lls upon</i> all Member States to expand vaccine manufacturers at the local scale, which will
63	-)		tribute to lowering the price and narrowing supply storage in the global vaccine market
64			bugh programs including, but not limited to China's National Biotec Group (CNBG) and
65 66		Ind	ian Panacea Co. by providing hierarchical vaccine delivery through the United Nations ildren's Fund (UNICEF),
67			
68 3 69 70	3)		<i>courages</i> developed Member States and philanthropists to support health education for local nmunities through partnerships with NGOs,
	4)	(PĂ	<i>ggests</i> that Member States take the example of the Pan-American Health Organization's AHO's) regional workshops on Emergency Preparedness and Response to Health ergencies which took place in 2011,
75 5 76 77 78 79	5)	Inte UN	<i>ls for</i> support from partner organizations such as the GAVI Alliance, World Bank, ernational Monetary Fund (IMF), Bill and Melinda Gates Foundation, Rotary International, ICEF, and other volunteering NGO's to train and prepare health professionals to contain ease outbreaks,
80 6 81)	Call	s upon the World Intellectual Properties Organization (WIPO) to discuss:
82 83		a) '	Vaccine patents and their effects on the vaccine distribution,
84 85 86			Strengthening partnerships between NGO's, states, legislators, and private investors to facilitate the production of low-cost, generic vaccines,

87 88	c)	Expanding	technologies to ensure that vaccines are delivered more effectively,	
89 90 91	7) <i>Calls for</i> referencing the Global Immunization Vision and Strategy (GIVS) and thereby expediently accomplishing MDG4 by:			
92 93 94	a)	Reiterating of current	g the importance of GIVS periodic progress reports that review the functionality programs,	
94 95 96	b)	Assuring the	he quality of safe products and services by:	
97 98		i.	Encouraging authenticity features on the outer packaging on vaccines,	
99 100		ii.	Establishing a logo to help consumers recognize credible online pharmacies,	
101 102		iii.	Promoting the notion of healthcare inspection for producers who manufacture active and inactive pharmaceutical ingredients,	
103 104 105		iv.	Encouraging strengthened record-keeping for wholesale distributors,	
106 107 108		v.	Launching multimedia public awareness campaigns on the dangers of counterfeit medical products, as well as training of professionals on identification of counterfeit vaccines,	
109 110 111 112		vi.	Developing tools for the identification and follow-up of health damages and providing services for tracing the distribution of medical products;	
113 114 115	,	main transp	stakeholders and actors involved in administration of immunization initiatives parent in their actions by regularly reporting the logistics of policy implementation	
116 117 118	a)	Promoting	information-sharing networks for outbreak control,	
119 120 121 122	b)		g the transparency standards adopted by the International Aid Transparency (IATI) which has also been implemented by the United Nations Development	
123 124 125 126 127	M Co	anagement ollaboration	creation and adoption of an internationally applicable Hierarchized Vaccine and Delivery System (HVMDS) created at an annual International Vaccination (IVC), hosted and attended by all Member States currently involved in efforts to deliver vaccines by:	
127 128 129	a)	Definin	g High-Efficiency Vaccine Distribution Areas (HEVDA) by:	
130 131 132		(Utilizing the 2005-edited WHO Vaccine Management Assessment (VMA) to evaluate the production and delivery capabilities of places harboring major vaccine producers and distributors,	

133 134 135	ii.	Noting those areas that score above 95% on the VMA and tagging such areas as a HEVDA,
136 137 138	· · ·	ng two representatives from all areas marked HEVDA to attend the IVCC and help d regularly revise the HVMDS,
139 140 141 142	, 1	ting elements of the preexisting, WHO-certified Effective Vaccine Management (EVMI) to expedite the delivery of vaccines within the defined centralized regions
143 144 145 146	i.	Utilizing health-oriented offices centered around the HEVDA that delegate duties and vaccine supplies to smaller collaboration centers, similar to the strategy used to eradicate smallpox,
147 148 149 150	ii.	Dividing duties to the smaller collaboration centers, each supplied and instructed by the nearest regional headquarters, set up in regions marked as high-risk areas for the spread of vaccine-preventable diseases including but not limited to rotaviruses and pneumococcal illnesses,
151 152 153 154	iii.	Encouraging greater exploration of cost-effective dry powder vaccines that do not require refrigeration;
154 155 156 157	d) Monitor experts;	ring and re-evaluating this policy every year at the IVC, presided over by a panel of
158 159 160 161	address recu	<i>ls</i> for the institutionalization of the GPEI community immunity strategy in order to urring disease outbreak areas, coupled with bi- or tri-yearly disease assessments by participatory Member States;
161 162 163 164		s increasing vaccination rates of populations that refuse vaccination on gious grounds by:
165 166 167	,	g and employing specialists who are responsive to the specific needs of susceptible phics within urban and rural areas,
168 169 170		oring the need to address religious and cultural concerns that cause demographics to of vaccinations,
171 172 173		g culturally-sensitive vaccine administrations to individuals that normally opt out ligious/other concerns,
174 175 176		g multimedia education material and telemedicine opportunities that enable easier vaccine information;
177 178		ing scorecards and dashboards to monitor and adjust vaccination programs implemented in smallpox eradication efforts;

179				
180	13) Promotes the drafting of comprehensive disease containment procedures by:			
181				
182	a)	Expanding operational research to improve the quality and cost-effectiveness of vaccines,		
183				
184	b)	Monitoring outbreak progression through the Global Outreach and Response Network		
185		(GORN),		
186				
187	c)	Assessing the economic and social ramifications of disease impact through implementation		
188		logistics reports conducted by participating Member States,		
189				
190	d)	Collectively developing disease-eradication initiatives between Member States in similar		
191		socio-economic circumstances;		
192				
193	14) Ei	mphasizes the importance of pharmaceutical companies as partners, in order to receive		
194	Va	accination donations, allow private sector marketing, enhance their corporate social		
195	re	sponsibility, and benefiting the WHO.
